

EAW KF Line Source Voicing Update

EAW has further advanced the KF720/NTL720, KF730 and KF740 line array systems by offering a completely new set of Greyboxes™ incorporating improved equalization, crossover, Focusing™ and limiting parameters for even better system performance without any physical changes.

Leveraging data and experience from development of Adaptive Systems, EAW's Line Source products now sound even more consistent and perform at an even higher overall level – all with just a software download.

A completely new set of Greyboxes for the KF720, KF730, KF737 and KF740 are available on the EAW website for free download. For the NTL720, a new firmware version is available via EAW Pilot™. New data sheets are also published.

EAW evaluated the new KF Line Source voicing at the Hanover Theater in Worcester, MA, which employs a 12-module Anya system.

KF740 Benefits

- Enhanced clarity and balance
- More accurate and consistent midrange directivity
- Increased system protection at very high output levels
- 4 dB improvement in low-frequency headroom using EAW DynO™ dynamic optimization (only available in EAW UX Series processors)

KF730 Benefits

- Characteristic tonality more closely matched to KF740 and Adaptive Systems
- Low-mid directivity significantly enhanced across coverage area
- Dramatic reduction in rear sound radiation
- Improved limiting and overall driver protection

KF720 and NTL720 Benefits

- Improved warmth, openness and clarity, better matching KF730, 740 and Adaptive Systems
- Greatly enhanced low-frequency support and output
- Larger selection of Greyboxes to match varying array sizes

All EAW Line Source Systems

- Superior pre-alignment with EAW touring subwoofers, requiring less tuning time on-site
- Enhanced phase linearity for an even cleaner impulse response everywhere in coverage area
